About this manual

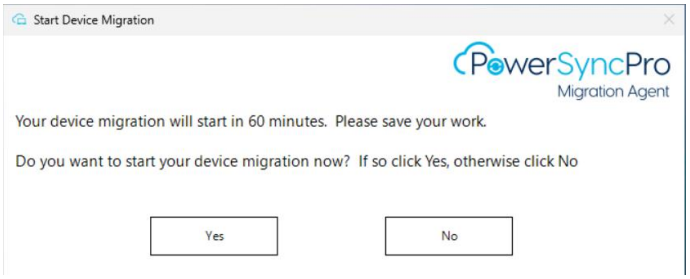

Step-by-step instructions for completing your device migration.

This manual covers the complete migration process, from starting the migration and setting up Windows Hello to verifying successful device enrollment.

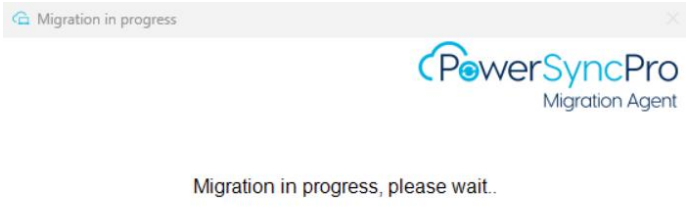

Follow the instructions in the left column and use the screenshot on the right as a visual reference. The migration itself should take no more than 10 minutes. Allow the device to restart when prompted, and do not interrupt the process.

Start the migration

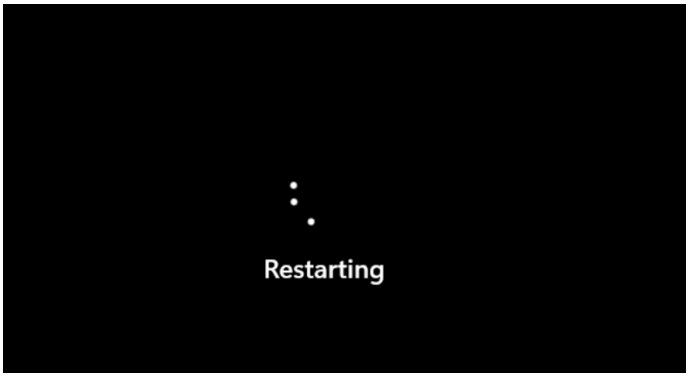

01
When the following pop-up appears, the migration of your profile and device will start.
Click Yes to proceed.

02
Migration started; the device will reboot in 1 to 2 minutes.

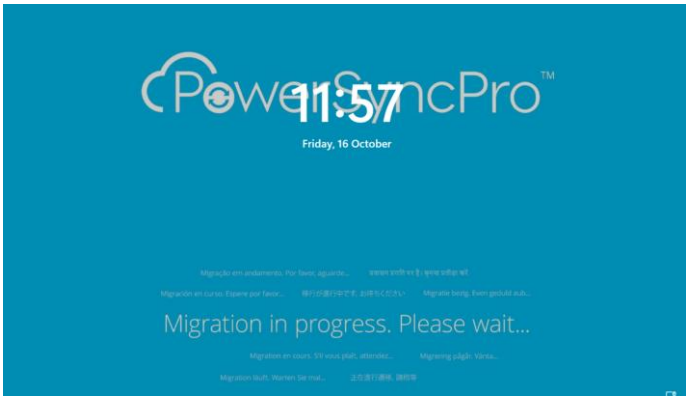

03
Now wait until the device reboots.

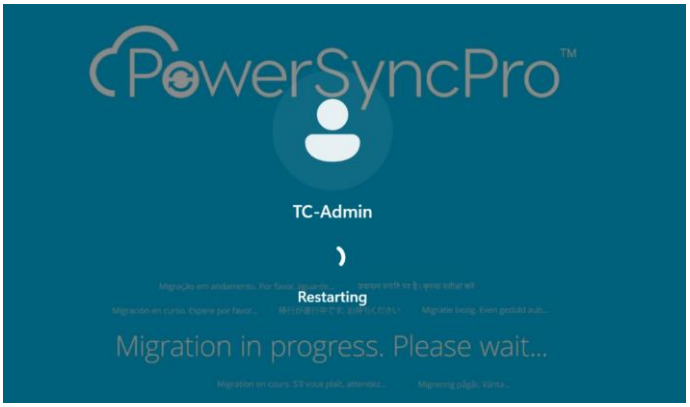

04

Do nothing on the next screen; wait until the next reboot.

05

The device will now reboot twice.

06

Migration still in progress.

07

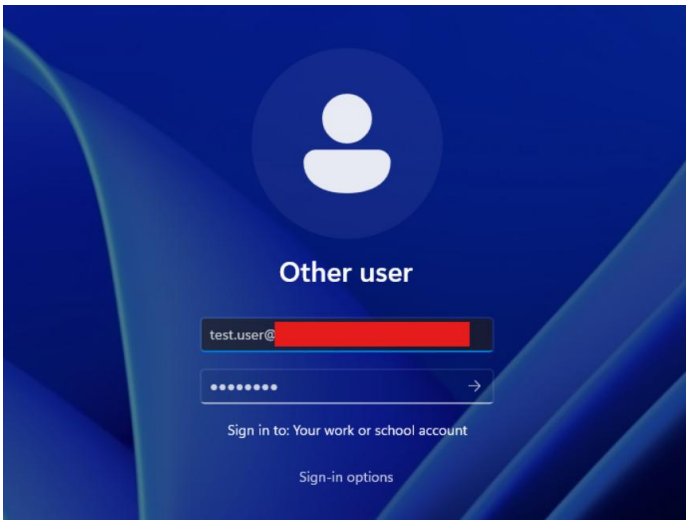

Again, a restart will happen.

Sign in and set up Windows Hello

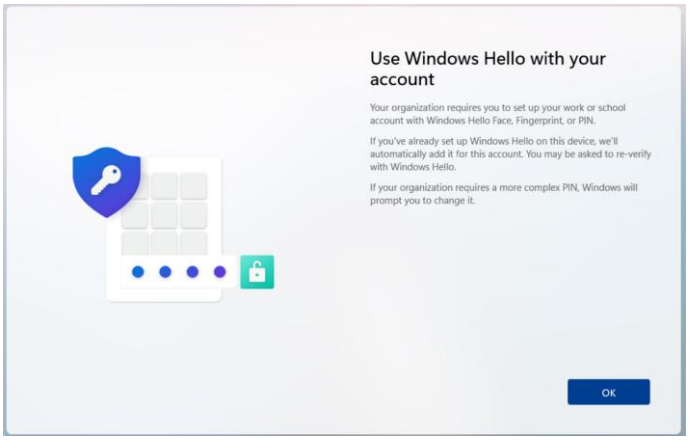

08

Now you can log on with your P95 account, but with your new password.

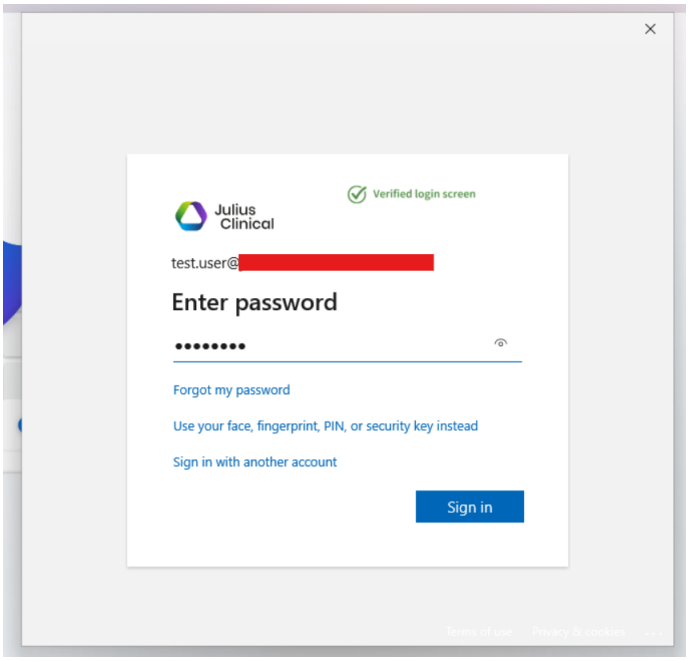

09

After first logon, Windows Hello needs to be configured.

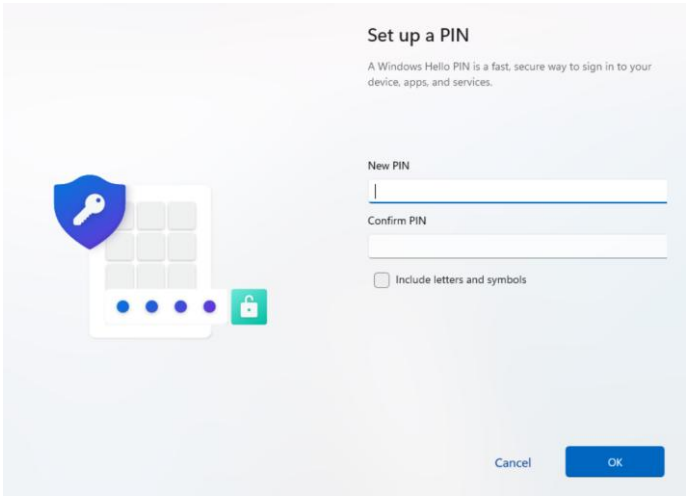

10

Fill in your new password and click "Sign in".

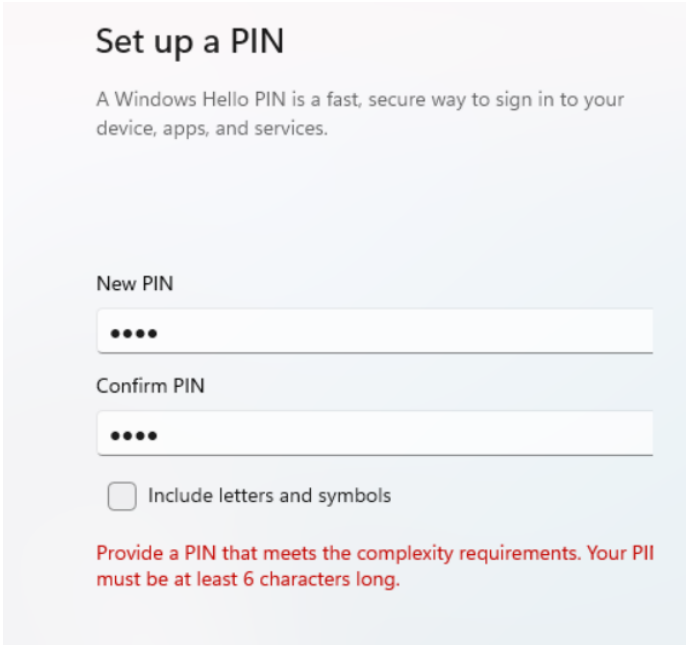

11

Next step is PIN setup.

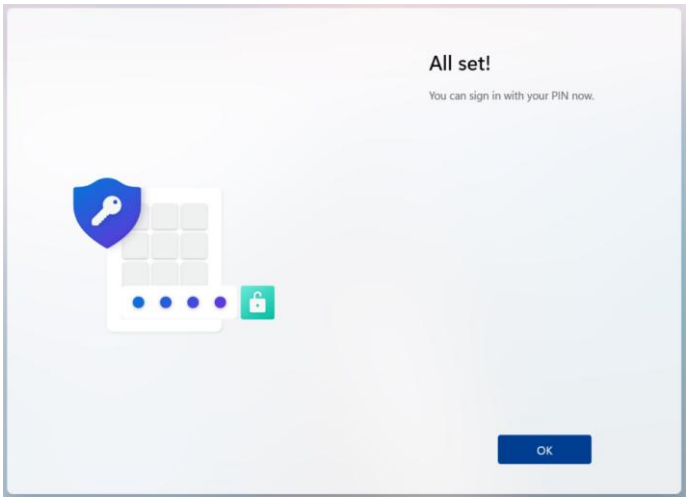

12

The PIN needs to be at least 6 characters long (6 numbers is OK); a mix of letters and symbols is also possible and free to choose.

13

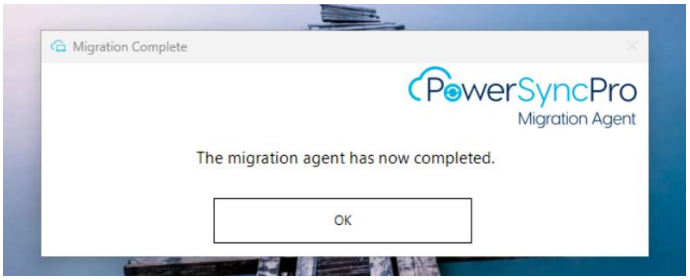

Click OK when the "All set" message appears.

Complete device enrollment

14

The migration agent is now finished.

15

Next step is the automatic enrollment of the device in the new environment.

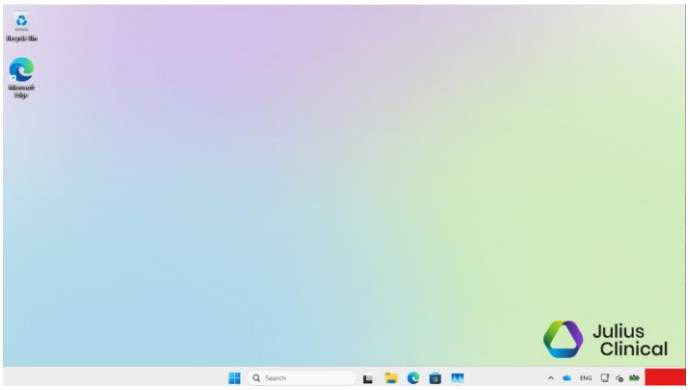

This is done automatically, but it takes some time before that happens.
After the restart it will take a couple of minutes, but you will notice that your device will start working on things in the background. You can see what is happening in the notification area of your computer. It will look like this.

Note: To speed things up, you can reboot your device after 5 to 10 minutes.

16

When the Julius Clinical wallpaper is visible, the onboarding is completed.

17

Now you can start opening your regular apps, like Outlook, Teams, etc.

Possibly it still needs some first-time startup information, but that is the same as getting a new device.

In your mailbox, you will also find confirmation that your device has been enrolled successfully.
